

# Financial UX Audit. - Create Better Experie

Create better banking experiences, build brand differentiation, delight, earn loyalty. spi

## CRUD OPERATIONS IN ASP.NET CORE MVC

NOVEMBER 10, 2018

Yes, I'd say a large percentage of most applications I've worked on is basic **CRUD(Create, Read, Update, Delete)** operations. Especially In an Admin Panel, you need to repeat the **CRUD** Operations for every object in your system.

For creating beautiful & responsive UI, I'm using **AdminLTE** Template. So, In case if you missed Setting up AdminLTE in Asp.net Core, then you can find here => [Setting up Admin Template in Asp.net Core MVC](#)

The screenshot displays the AdminPanelTutorial interface. On the left is a dark sidebar with a user profile for 'Shehryar Khan' (Online) and a search bar. Below the profile are menu items: Home, Doctors, Nurses, and Patients. The main content area is titled 'Data Tables' and 'advanced tables'. It shows a 'Data Table With Full Features' with a search bar and a 'Show 10 entries' dropdown. The table has columns for Id, Name, Email, Phone, Created, Specialist, and Action. There are 7 rows of data, all for 'Shehryar Khan' with a 'Heart' specialist. Each row has 'Update | Delete' links in the Action column. A 'Privacy - Terms' link is visible in the bottom right corner.

Id	Name	Email	Phone	Created	Specialist	Action
1	Ahsan Saeed	ahsansaeed067@gmail.com	03218878961	05/01/2018 18:07:24 +00:00	Heart	<a href="#">Update</a>   <a href="#">Delete</a>
2	Shehryar Khan	shehryarkn@gmail.com	03356742080	11/09/2018 21:33:06 +00:00	Heart	<a href="#">Update</a>   <a href="#">Delete</a>
3	Shehryar Khan	shehryarkn@gmail.com	3433243243	11/09/2018 23:45:55 +00:00	Heart	<a href="#">Update</a>   <a href="#">Delete</a>
4	Shehryar Khan	shehryarkn@gmail.com	3433243243	11/09/2018 23:47:51 +00:00	Heart	<a href="#">Update</a>   <a href="#">Delete</a>
5	Shehryar Khan	shehryarkn@gmail.com	3433243243	11/09/2018 23:48:36 +00:00	Heart	<a href="#">Update</a>   <a href="#">Delete</a>

## Free Writing Tool

Improve grammar, word choice, and sentence structure in your writing

Assuming that you have followed the above [tutorial](#) & setup your project, let's start our Asp.net Core CRUD Operations Tutorial.

If you want to create Models from MySQL Database then you can follow this Article => [Entity Framework Core Database First – Asp.Net Core Scaffold MySql DB](#)

I'm performing my **CRUD Operation** on this Database Table. You can use your own Table.

id	name	email	password	phone	gender	specialist	created
----	------	-------	----------	-------	--------	------------	---------

First of all, create a Controller as “DoctorsController.cs” & Add this Code.

```
1. using System.Linq;
2. using AdminPanelTutorial.Models;
3. using Microsoft.AspNetCore;
4. using Microsoft.AspNetCore.Hosting;
5. using Microsoft.AspNetCore.Mvc;
6.
7. namespace AdminPanelTutorial
8. {
9.     public class DoctorsController : Controller
10.    {
```

```
11.         MyDbContext db = new MyDbContext();
12.     public ActionResult Index()
13.     {
14.         return View(db.Doctors.ToList());
15.     }
16.
17.     public ActionResult Create()
18.     {
19.         return View();
20.     }
21.
22.     [HttpPost]
23.     public ActionResult CreateDoctor(Doctors doctor){
24.         db.Doctors.Add(doctor);
25.         db.SaveChanges();
26.         return RedirectToAction("Index", "Doctors");
27.     }
28.
29.     [HttpPost]
30.     public bool Delete(int id){
31.         try
32.         {
33.             Doctors doctor = db.Doctors.Where(s => s.Id == id).First();
34.             db.Doctors.Remove(doctor);
35.             db.SaveChanges();
36.             return true;
37.         }
38.         catch (System.Exception)
39.         {
40.             return false;
41.         }
42.     }
43.
44.
45.     public ActionResult Update(int id){
46.         return View(db.Doctors.Where(s => s.Id == id).First());
47.     }
48.
49.     [HttpPost]
50.     public ActionResult UpdateDoctor(Doctors doctor){
51.         Doctors d = db.Doctors.Where(s => s.Id == doctor.Id).First();
52.         d.Name = doctor.Name;
53.         d.Phone = doctor.Phone;
54.         d.Specialist = doctor.Specialist;
55.         db.SaveChanges();
56.         return RedirectToAction("Index", "Doctors");
57.     }
58. }
59. }
```

\* Update your Solution name

Code Explanation:

## Financial UX Audit. - Create Better I

Create better banking experiences, build brand differentiation, delight, e

We have an **Index** Method to list all records from Doctors Table to our DataTable.

We have **Create** Method to open Create Doctor Form & when we Submit this Form our **CreateDoctor** will be used to Add Doctor into the Database.

You must Encrypt your Password before storing it into Database. You may follow this Tutorial for Password Hashing Code => [C# Hashing algorithm class](#)

We have only one Method to **Delete Doctor** because we'll use Ajax to delete our Doctor.

Now Create a new Folder as “Doctors” inside your “Views” Folder & Create these 3 Files inside “Doctors” Folders => “Index.cshtml”, “Create.cshtml”, “Update.cshtml”

Add this Code into your “Index.cshtml”

```
1. @model IEnumerable<AdminPanelTutorial.Models.Doctors>
2.
3. <section class="content-header">
4.     <h1>
```

```

5.     Doctors
6.     </h1>
7.     <ol class="breadcrumb">
8.     <li><a href="#"><i class="fa fa-dashboard"></i> Home</a></li>
9.     <li class="active">Doctors</li>
10.    </ol>
11. </section>
12. <!-- Main content -->
13. <section class="content">
14.     <div class="row">
15.         <div class="col-xs-12">
16.             <div class="box">
17.                 <div class="box-header">
18.                     <h3 class="box-title">Manage Doctors</h3>
19.                 </div>
20.                 <!-- /.box-header -->
21.                 <div class="box-body">
22.                     <table id="example1" class="table table-bordered table-striped">
23.                         <thead>
24.                         <tr>
25.                             <th>Id</th>
26.                             <th>Name</th>
27.                             <th>Email</th>
28.                             <th>Phone</th>
29.                             <th>Created</th>
30.                             <th>Specialist</th>
31.                             <th>Action</th>
32.                         </tr>
33.                         </thead>
34.                         <tbody>
35.                             @foreach (var item in Model)
36.                             {
37.                                 <tr>
38.                                     <td>@Html.DisplayFor(modelItem => item.Id)</td>
39.                                     <td>@Html.DisplayFor(modelItem => item.Name)</td>
40.                                     <td>@Html.DisplayFor(modelItem => item.Email)</td>
41.                                     <td>@Html.DisplayFor(modelItem => item.Phone)</td>
42.                                     <td>@Html.DisplayFor(modelItem => item.Created)</td>
43.                                     <td>@Html.DisplayFor(modelItem => item.Specialist)</td>
44.                                     <td><a href="Doctors/Update/@item.Id">Update</a> | <a href=""
onclick="Delete('@item.Id')">Delete</a></td>
45.                                 </tr>
46.                             }
47.                         </tbody>
48.                     </table>
49.                 <!-- /.box-body -->
50.             </div>
51.         <!-- /.col -->
52.     </div>
53. <!-- /.col -->
54. </div>

```

```
55.     <!-- /.row -->
56. </section>
57.
58. <!-- DataTables -->
59. <script src="~/bower_components/datatables.net/js/jquery.dataTables.min.js">
60. </script>
61. <script src="~/bower_components/datatables.net-bs/js/dataTables.bootstrap.min.js">
62. </script>
63. <!-- page script -->
64. <script>
65.     $(function () {
66.         $('#example1').DataTable();
67.     });
68.     function Delete(id){
69.         var txt;
70.         var r = confirm("Are you sure you want to Delete?");
71.         if (r == true) {
72.             $.ajax(
73.             {
74.                 type: "POST",
75.                 url: '@Url.Action("Delete", "Doctors")',
76.                 data: {
77.                     id: id
78.                 },
79.                 error: function (result) {
80.                     alert("error");
81.                 },
82.                 success: function (result) {
83.                     if (result == true) {
84.                         var baseUrl="/Doctors";
85.                         window.location.reload();
86.                     }
87.                     else {
88.                         alert("There is a problem, Try Later!");
89.                     }
90.                 }
91.             });
92.         }
93.     }
94. </script>
```

**\* Don't forget to replace your Solution name with "AdminPanelTutorial" at the very First line of this Code**

Add "DataTables" css file into your "\_\_Layout.cshtml" (Created in the [First Part](#) of this Tutorial) after BootStrap css added at the start of the File

```
1. <!-- DataTables -->
2. <link rel="stylesheet" href="~/bower_components/datatables.net-bs/css
   /dataTables.bootstrap.min.css">
```

your “\_Layout.cshtml” will look like this

```
7 <!-- Tell the browser to be responsive to screen width -->
8 <meta content="width=device-width, initial-scale=1, maximum-scale=1, user-scalable=no" name="viewport">
9 <link rel="stylesheet" href="~/bower_components/bootstrap/dist/css/bootstrap.min.css">
10
11 <!-- DataTables -->
12 <link rel="stylesheet" href="~/bower_components/datatables.net-bs/css/dataTables.bootstrap.min.css">
13
14 <!-- Font Awesome -->
15 <link rel="stylesheet" href="~/bower_components/font-awesome/css/font-awesome.min.css">
```

You can see that I have already Added Ajax at the End of the Code above to **Delete the Doctor Record** from the Database.

Now run your Project & go to <http://localhost:port/Doctors> (replace your port)

you’ll see All Doctors from your Database Table.

You can Also Test Your Delete Operation, It should work fine.

Let’s move Further & Add Code below into your “Create.cshtml”

```
1. <!-- Content Header (Page header) -->
2. <section class="content-header">
3.     <h1>
4.         Doctors
5.     </h1>
6. </section>
7. <!-- Main content -->
8. <section class="content container-fluid">
9.     <!-- Horizontal Form -->
10.    <div class="box box-info">
11.        <div class="box-header with-border">
12.            <h3 class="box-title">Add Doctor</h3>
13.        </div>
14.    <!-- /.box-header -->
15.    <!-- form start -->
16.    <form class="form-horizontal" method="post" action="CreateDoctor">
```

```
17.         <div class="box-body">
18.         <div class="form-group">
19.             <label for="inputEmail3" class="col-sm-2 control-label">Name</label>
20.             <div class="col-sm-10">
21.                 <input type="text" class="form-control" name="Name" placeholder="Name">
22.             </div>
23.         </div>
24.         <div class="form-group">
25.             <label for="inputEmail3" class="col-sm-2 control-label">Email</label>
26.             <div class="col-sm-10">
27.                 <input type="email" class="form-control" name="Email"
placeholder="Email">
28.             </div>
29.         </div>
30.         <div class="form-group">
31.             <label for="inputPassword3" class="col-sm-2 control-
label">Password</label>
32.             <div class="col-sm-10">
33.                 <input type="password" class="form-control" name="Password"
placeholder="Password">
34.             </div>
35.         </div>
36.         <div class="form-group">
37.             <label for="inputEmail3" class="col-sm-2 control-label">Phone</label>
38.             <div class="col-sm-10">
39.                 <input type="text" class="form-control" name="Phone"
placeholder="Phone">
40.             </div>
41.         </div>
42.         <div class="form-group">
43.             <label for="inputEmail3" class="col-sm-2 control-
label">Specialist</label>
44.             <div class="col-sm-10">
45.                 <input type="text" class="form-control" name="Specialist"
placeholder="Specialist">
46.             </div>
47.         </div>
48.     </div>
49.     <!-- /.box-body -->
50.     <div class="box-footer">
51.         <button type="submit" class="btn btn-default">Cancel</button>
52.         <button type="submit" class="btn btn-info pull-right">Create</button>
53.     </div>
54.     <!-- /.box-footer -->
55. </form>
56. </div>
57. <!-- /.box -->
58. </section>
```

Run your project & go to <https://localhost:port/Doctors/Create>

You'll see this Page

The screenshot shows the AdminPanelTutorial web application. On the left is a dark sidebar with a user profile for 'Shehryar Khan' (Online) and a search bar. Below the search bar are navigation links: Home, Doctors, Nurses, and Patients. The main content area has a blue header with the title 'Doctors' and a user profile for 'Shehryar Khan'. Below the header is a form titled 'Add Doctor'. The form contains the following fields: Name (text input), Email (text input with value 'shehryarkn@gmail.com'), Password (password input with masked characters '....'), Phone (text input), and Specialist (text input). At the bottom of the form are 'Cancel' and 'Create' buttons. The footer of the page reads 'Copyright © 2018 Codinginfinite. All rights reserved.'

Try to create a new Doctor, It will Add new Doctor & redirect you to Index Page.

Now the last thing is our Update Operation.

Open your “Update.cshtml” file Add this Code

```

1. @model AdminPanelTutorial.Models.Doctors
2.
3. <section class="content-header">
4.     <h1>
5.         Doctors
6.     </h1>
7. </section>
8. <!-- Main content -->
9. <section class="content container-fluid">
10.     <!-- Horizontal Form -->
11.     <div class="box box-info">
12.         <div class="box-header with-border">
13.             <h3 class="box-title">Update Doctor</h3>
14.         </div>
15.         <!-- /.box-header -->
16.         <!-- form start -->
17.         <form class="form-horizontal" method="post" action="/Doctors/UpdateDoctor">
18.             <div class="box-body">
19.                 <div class="form-group">

```

```

20.         <label for="inputEmail3" class="col-sm-2 control-label">Email</label>
21.         <div class="col-sm-10">
22.             <input type="Email" class="form-control" name="Email"
value="@Model.Email">
23.         </div>
24.     </div>
25.     <div class="form-group">
26.         <label for="inputEmail3" class="col-sm-2 control-label">Name</label>
27.         <div class="col-sm-10">
28.             <input type="text" class="form-control" name="Name" placeholder="Name"
value="@Model.Name">
29.         </div>
30.     </div>
31.     <div class="form-group">
32.         <label for="inputEmail3" class="col-sm-2 control-label">Phone</label>
33.         <div class="col-sm-10">
34.             <input type="text" class="form-control" name="Phone"
placeholder="Phone" value="@Model.Phone">
35.         </div>
36.     </div>
37.     <div class="form-group">
38.         <label for="inputEmail3" class="col-sm-2 control-
label">Specialist</label>
39.         <div class="col-sm-10">
40.             <input type="text" class="form-control" name="Specialist"
placeholder="Specialist" value="@Model.Specialist">
41.         </div>
42.     </div>
43.     <input type="hidden" name="Id" value="@Model.Id"/>
44. </div>
45. <!-- /.box-body -->
46. <div class="box-footer">
47.     <button type="submit" class="btn btn-default">Cancel</button>
48.     <button type="submit" class="btn btn-info pull-right">Update</button>
49. </div>
50. <!-- /.box-footer -->
51. </form>
52. </div>
53. <!-- /.box -->
54. </section>

```

**\* Don't forget to replace your Solution name with "AdminPanelTutorial" at the very First line of this Code**

Now run your Project & Update a Doctor Record.

I hope that everything is working fine & your CRUD operations are working

perfectly. You can use your UI Template & Database Table for Performing your CRUD Operations. I used This AdminLTE Template just to Beautify our UI you can use your own.

You can also download the complete project from GitHub.

hy kindly share with me the whole project on "zahid.qamar86@gmail.com" and also tell me where did you make "MyDbContext db = new MyDbContext()" this class?

**SHEHRYAR KHAN**

POST AUTHOR

[↩ REPLY](#)

3 WEEKS AGO

check at the end of Scaffold string below. we can give any name instead of MyDbContext.

```
dotnet ef dbcontext scaffold "Server=localhost;User Id=root;
```

```
Password=1234;Database=MyTestDB"
```

```
"Pomelo.EntityFrameworkCore.MySql" -c MyDbContext -o Models
```

For Scaffold you can use this Tutorial

or if you want to Scaffold without Pomelo, here's my Tutorial for that =>

<https://dottutorials.net/scaffold-mysql-dotnet-core-database-first-approach/>

How do I put search and paging in grid using Bower?

**PEDRO**

4 MONTHS AGO

[↩ REPLY](#)

Hi, very good post you have here! i have an issue that you might help. The ajax call for the delete works, but the datatable is not refreshed the first time. I need to refresh the full page again to see the id getting removed. Instead of using direct db inserts i am using tasks and async calls to rest api. Any ideas on how to solve this? Does your example remove the row straight away? Thanks.

6 MONTHS AGO

include jQuery before Datatables js files if you are getting this error. The best place to Add jQuery is at the top of layout page.

**KEVIN KOUKETSU**

[↩ REPLY](#)

7 MONTHS AGO

Don't make sense you insert script inside Index.cshtml on Doctors view. At this moment, jQuery it's not already loaded. It's on the middle of HTML code.

**SHEHRYAR KHAN** POST AUTHOR

[↩ REPLY](#)

7 MONTHS AGO

jQuery is added at the top of Layout page & Layout page loads first then render the body inside. That's why It's working fine, you can download the source from GitHub & test.
