Material table datasource filter with column value

Asked 1 year, 11 months ago Active yesterday Viewed 32k times

How can I filter the material data table with specific column ?

14

```
public dataSource;
```

4

```
this.dataSource = new MatTableDataSource(this.items);
this.dataSource.filterPredicate = function customFilter(data ,
filter:string ): boolean {
    return (data.name.startsWith(filter));
}

applyFilter(filterValue: string) {
    filterValue = filterValue.trim(); // Remove whitespace
    filterValue = filterValue.toLowerCase(); // MatTableDataSource defaults to
lowercase matches
    this.dataSource.filter = filterValue;
}
```

The above code is not working, when I type returns as no data is matched.

Did you apply the filter? – [David](#) May 10 '18 at 6:39
